Bioclimatic variables were recorded using GBIF dataset, based on location of collected species.

Table 1: Description of bioclimatic variables

Variable	**Description**
`log10_range_size`	Log_{10}-transformed geographic range size (response variable)
`log10_2C_genome.size`	Log_{10}-transformed 2C genome size
`num_chr2n`	Diploid chromosome number
`Latitude`	Latitude
`Growth_form`	Plant growth form
`log10_occurence`	Log_{10}-transformed occurrence
`Longitude`	Longitude
`Mean.aridity.index`	Mean aridity index
`Mean.BIO1`	Mean annual temperature
`Mean.BIO3`	Isothermality
`Mean.BIO7`	Annual temperature range
`Mean.BIO12`	Annual precipitation
`Mean.BIO15`	Precipitation seasonality
`Mean.BIO19`	Precipitation of the coldest quarter
`Mean.GSL`	Growing season length
`Mean.GST`	Temperature during the growing season
`Mean.NGD5`	Number of days with temperature $> 5°C$
`Mean.UVB1`	Annual ultraviolet-B radiation
`Mean.UVB3`	Mean UV-B radiation of the highest month
`Mean.UVB5`	Sum of monthly mean UV-B radiation
